

Answer the following briefly and directly: write a python code to get a input string from a user and store it in a list.

Here is a simple Python code that takes an input string from a user and stores it in a list:

```
```python
# Take input from user
input_string = input("Please enter a string: ")

# Store the input string in a list
list_string = input_string.split()

# Print the list
print("Your list is: ", list_string)
```
```

In this code, the `input()`
